

How to Use This Presentation Template

Use this as a reference while presenting / recording your submission video and Remove this slide from actual Presentation once ready.

- **Understanding the Structure:** Familiarize yourself with the slide order and content to effectively communicate your project's message.
- **Customizing the Content:** Adjust the text and visuals to match your team's specific project details and outcomes. Feel free to add more slides if needed.
- **Presenting Effectively:** Use the notes section to prepare your speech and practice delivering the presentation to ensure a smooth performance.
- **Submission Process:** Follow the specific guidelines for submitting your presentation as detailed in the 'Submission Guidelines' slide.

Disclaimer

Use this as a reference while presenting / recording your submission video and Remove this slide from actual Presentation once ready.

You will be able to upload the submission to a FOLDER named: **Hackathon Submissions Uploads** which is available in the Microsoft Teams channel. Every team member has access to upload the submission. Please either nominate a team member to upload the submission or ask your **Team Lead Associate** to upload the final document in the share path with naming convention as : “**Team Name_Team Lead Associate ID**”

File Name Example: **AzureCloud_123456**.

Please follow the below guidelines for your solution :

- The video duration should be of shorter version (preferably not more than 5 minutes)
- The video format should be converted to MP4 format
- The recommended file size to upload is 250 to 500 MB
- The team POC should upload the project presentation **PPT (using this PPT as a base template)** and the **MP4** file within your project folder in Microsoft Teams.

Sample Screenshot of Upload Location

Use this as a reference while presenting / recording your submission video and Remove this slide from actual Presentation once ready.

You will be able to upload the submission to a FOLDER named:

Hackathon Submissions Uploads which is available in the Microsoft Teams channel.

Complete Hackathon Presentation Flow

This is just a generic outline of how the Presentation flow must be, Use this as a reference while presenting / recording your submission video and Remove this slide from actual Presentation once ready.

- **Team Introduction:** Meet the diverse team and understand their roles.
- **Submission Guidelines:** Details on how to format and submit projects.
- **Project Overview:** High-level summary of the project's purpose and objectives.
- **Technical Architecture:** Explains the technical structure and technology choices.
- **Execution Steps:** Guide on how to set up and run the project.
- **Demo and Results:** Showcase of the project's functionalities and achievements.
- **Future Roadmap:** Planned developments and next steps for participants.

CALIBER Hackathon Submission Guidelines

Use this as a reference while presenting / recording your submission video and Remove this slide from actual Presentation once ready.

- **Video Requirements:** Video must be in MP4 format, not exceeding 5 minutes in length, focusing on key aspects of the project.
- **Team Leaders** will be added as part of a TEAMS channel in Microsoft Teams. This will be the single source of communication for all Hackathon related queries.
- **Ensure all Hackathon related** queries are posted in the TEAMS Channel and only the team leader communicates on behalf of the team for any clarification(s).
- **Submission Format:** Name your files using the convention: 'TeamName_LeadID'. Include all relevant project documentation and source code.
- **Upload Instructions:** Upload your project presentation and video file to the designated SharePoint (Teams) folder. Access will be granted to team leads.
- **Contact Information:** For any queries, contact Microsoft Academy at MicrosoftAcademy@cognizant.com

Introduction of the Team with Pictures

Hackathon Team Introduction

- **Team Composition:** Highlighting the diverse expertise and roles within our team, enhancing collaboration and innovation.
- **Professional Backgrounds:** Each member brings a unique set of skills and experiences from various professional backgrounds, contributing to a robust problem-solving approach.
- **Roles and Responsibilities:** Clear definition of roles ensures efficient project management and task allocation, driving the team towards common goals.

Project Overview

- **Executive Summary:** Provides a high-level overview of the project, underscoring its importance and the innovative solutions it brings.
- **Problem Statement:** Identifies the key challenge the project addresses, emphasizing the impact of this problem on the target audience.
- **Objective:** Outlines the primary goals of the project, detailing the expected outcomes and benefits.

Technical Architecture

- **Logical Architecture:** Describes the arrangement and interactions of the system's core components, emphasizing scalability and efficiency.
- **Detailed Architecture Diagram:** Includes a visual diagram that delineates the structure and interconnections between different system elements.
- **Technology Justification:** Explains the choice of technologies used in the project, highlighting their relevance and benefits to the architectural design.

Execution Steps

- **Setup Instructions:** Comprehensive instructions for setting up the project environment, ensuring all necessary components are correctly installed.
- **Execution Process:** A detailed, step-by-step guide to running the project, including initial configuration and start commands.
- **Troubleshooting Tips:** List of common issues that may arise and recommended solutions to help participants effectively solve problems.

VM Details & Instructions to execute code (If any)

VM Details

- ✓ IP :
- ✓ User Id :
- ✓ Password :

How to Execute the Code (Steps)

Demo and Results

- **Demo Link:** Includes a QR code and URL for easy access to the project demo, allowing viewers to experience the application firsthand.
- **Key Findings and Results:** Highlights the significant outcomes and successes of the project, demonstrating its impact and effectiveness.

Additional Details in Brief (*Add as much as possible*)

- **Use Case / Idea:** Describes specific scenarios in which the project can be applied, highlighting practical applications and potential real-world uses. This section helps judges understand where and how the proposed solution fits into existing workflows or solves problems.
- **Introduction to Solution:** Provides an initial overview of the proposed solution, introducing the main components or features. This section sets the stage for a more detailed discussion by giving a snapshot of what the solution entails and its primary function.
- **What it does ? (detail it out):** Expands on the capabilities and functionalities of the solution, detailing step-by-step how it addresses the problem statement. This includes explaining the processes, interactions with users or other systems, and the expected behaviors in various scenarios.
- **Architecture Explanation :** Outlines the structural design of the solution, including the technology stack, data flows, and major components. This section should elucidate how different parts of the system interact, any dependencies, and how data integrity and security are maintained.
- **Assumptions:** Enumerates the underlying assumptions made during the planning and development of the project. This section helps clarify the conditions under which the project is expected to operate effectively and outlines anticipated external factors, such as user behaviors, technological environments, or market dynamics, that could influence the outcomes.
- **Technical Details (Explain why you have chosen these components in your architecture):** Provides a deep dive into the technical components selected for the project's architecture, explaining the rationale behind each choice. This section should detail why specific technologies, platforms, or frameworks were chosen over others, focusing on their advantages in terms of performance, scalability, compatibility, security, or cost-effectiveness.
- **Problem Statement:** Identifies the key challenge the project addresses, emphasizing the impact of this problem on the target audience.
- **Objective:** Outlines the primary goals of the project, detailing the expected outcomes and benefits.

Future Roadmap and Next Steps

- **Future Development:** Outlines the timeline of planned features and enhancements, illustrating the project's growth trajectory.
- **Next Steps:** Details immediate actions participants can take post-hackathon to continue development and engagement.

Thank You
